

## **CENTRO MEETS CARB AND EPA FUEL TANK STANDARDS**

Centro, Inc., the largest custom rotational molder in North America, has recently completed the 3<sup>rd</sup> quarter of a two-year, \$100,000 research program. This program is aimed at identifying rotational molding solutions that will meet both the California Air Resources Board (C.A.R.B.) and Environmental Protection Agency (E.P.A.) fuel tank requirements. These requirements will restrict the amount of fuel permeation allowed from fuel tanks. The CARB requirement will take effect as early as 2007.

Centro's study has currently identified several rotational molding solutions to the requirements and as the process continues we will choose the most reliable, cost effective method for our customers.

If you would like additional information on how Centro can help you meet the upcoming requirements by molding your fuel tanks please contact Kent Shepherd at 319-626-7495 or [kshepherd@centroinc.com](mailto:kshepherd@centroinc.com). Please visit [www.centroinc.com](http://www.centroinc.com).
